Wiki.js

Official Documentation for v2

Documentation is being worked on! Some pages may be incomplete or not exist yet.

Getting Started

Wiki.js is quick and easy to install. You should be up and running in no time.

Make sure you have read the [server requirements](#).

Follow the quick and simple [installation guide](#).

Using Docker? Use the [Docker installation guide](#) instead.

Using Heroku? Use the [Heroku installation guide](#) instead.

Administration

Locales: Display the wiki in a different language or enable multilingual capabilities.

User Groups: Permissions and access rights.

Telemetry: Help Wiki.js developers understand crashes by enabling anonymous telemetry.

Troubleshooting: Solutions to common issues.

Modules

Modules greatly expand the capabilities of your wiki.

Authentication: Configure how users can login and register to your wiki.

Editors: Manage the various editors used to create content.

Logging: Forward logs to external logging services.

Rendering: Configure how content is parsed and rendered into its readable form.

Search Engines: Manage the search capabilities of your wiki.
